# Lagois...total design solutions

**Lagois Drafting & Construction Inc.** was established in 1984 as a unique architectural design and construction company providing design and build services in the Greater Ottawa area for Custom Homes, Renovations and Additions.

Our designs reflect directly upon our construction experience. Unique, innovative, efficient, Bill 124 Certified, and award winning designs help YOU, the client, save. All too often, consumers are charged outrageous fees for inefficient designs which escalate construction costs. Holistic design is our philosophical approach: from conceptual to working drawings to construction.

Taking our design philosophy to new levels: In 2002, Lagois Mechanical Inc. was established offering energy efficient solutions: in-floor (Hydronic) radiant heating, geothermal heat pumps, and air quality solutions (HRV's, ERV's, etc.) Our belief is: Your home, Your renovation and/or Your addition should be designed as a system – the holistic approach.

We are proud to offer our services as options: You may choose us to do the Architectural Designs only (You own the drawings at the end of the process); construction only; mechanical services only; or we can design and construct Your project from concept to fruition!
