

Before and

After

Lagois Insists on the Best

Back in 1984, when Lagois Drafting and Construction, Inc. began, we did most of our designing with pencil and paper.

But, as you know, trends and technology change. Now we work with full 3-D CAD (Computer-Aided Design) drawings. We can model your projects for energy-efficiency with material choices based on energy performance and payback periods.

Lagois Drafting & Construction Inc. is a unique, local, award-winning design and construction company. To ensure designs comply with local by-laws, the Lagois design team researches setbacks, lot restrictions, applicable laws (heritage, flood plain, septic authorities, etc.). Our process is interactive, working towards the ultimate goal of the project – such as future barrier-free requirements and future pools.

We constantly review budget costs to make sure the project is realistic. Once designs are complete, we produce Bill-124 certified working drawings, ready for permit, tendering and actual construction. You own the drawings. Lagois can

construct, or you can choose to construct with another builder.

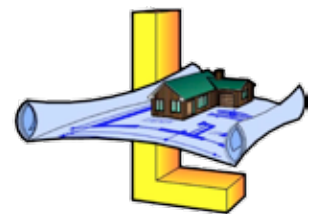

Our pricing process is involved and detailed. We want to ensure you understand what value you are getting for your money. Products are chosen before construction begins so that your budget is met and materials ordered arrive when needed.

We also insist that you get it in writing. Our contracts include completion dates and start dates and detailed specifications.

Throughout our 25-year history, Lagois has given back to the community through charities such as YMCA, Habitat for Humanity, and Ronald McDonald House. (In fact, we have just completed a playroom addition for Ronald McDonald House.)

We are proud to be a solid, reliable, holistic and innovative company that provides both professional design and construction services. We're looking forward to our next 25 years.

LAGOIS
